Press Release

BedRock Announces: *AggFlow* Program Release

BedRock Software, Inc. (BedRock) has announced the release of AggFlow - a computer simulation and calculation program for use in optimizing aggregate plant production.

AggFlow has been developed in response to demand in the aggregate industry for plant optimization tools that more closely resemble actual operating parameters. The program is designed to reduce calculation time and increase productivity in aggregate and mining operations.

AggFlow has been developed by BedRock Software, Incorporated, an independent engineering analysis and computer programming firm.
