Press Release

BedRock Announces: AggFlow version 6.i “Internet Capable” program

BedRock Software, Inc. (BedRock) announces the release of AggFlow version 6.i “Internet Capable” program. Version 6.i provides the first AggFlow version that allows users to access program updates and upgrades directly through the internet. Beginning with version 6.1 users will be automatically notified when program updates are available and will be able to download those updates instantaneously at the push of a button.

In addition to the internet capabilities, AggFlow 6.i includes an expanded equipment library and improved calculation capabilities. “Our global user base will benefit significantly from this advance since they can now download and update directly over the internet rather than through cumbersome disk based updates. It also avoids the hassles and costs of shipping the update disk. This is particularly important for our international customers” says Trevor Warren, Senior Production Manager of BedRock Software, Inc.

AggFlow is used by aggregate producers, equipment manufacturers and dealers around the world to reduce calculation time and increase productivity in aggregate and mining operations. Visit the AggFlow website for more detailed information at: www.aggflow.com

BedRock Software, Inc. has been providing the AggFlow program to the aggregate industry since 1993. BedRock is an independent, privately held company.
