Press Release

BedRock Announces: Spanish & French Translations

BedRock Software, Inc. (BedRock) is pleased to announce the addition of French and Spanish translations of the AggFlow plant simulation program. “This is an important step as we continue to bolster our international distribution and customize the program for our users around the globe. We have started with two obvious language choices but there will certainly be more in the near future” said Mark Pirogovsky, Senior Programming Engineer and Vice President of program development. Pirogovsky is a native Russian speaker.

AggFlow is used by aggregate producers, equipment manufacturers and dealers around the world to reduce calculation time and increase productivity in aggregate and mining operations. Thus optimizing operation layouts and maximizing production of desired products. Through the User Preferences menu program users can customize nearly every aspect of AggFlow from measurement units to print titles and now even the language selection.

In addition to the language capability, BedRock has added password protected “File Protection”. This feature enables AggFlow users to create and send files without concern for changes being made. The program has also been updated to include 300 new pieces of crushing and screening equipment. The AggFlow data library now contains more than 2,500 pieces of equipment for simulation from manufacturers around the globe.

AggFlow improves profitability by reducing plant down-time and production errors. And helps reduce emissions and fuel consumption by refining overall plant efficiency. AggFlow is extremely popular with users because it is accurate & easy to use. Visit the AggFlow website for more detailed information at: www.aggflow.com

BedRock Software, Inc. has been providing the AggFlow program to the global aggregate industry since 1993. AggFlow, the first fully independent calculation application, is recognized as the industry standard plant flow analysis tool.
